A new way of thinking about style in PVC-U

Take a look at the stylish lines of this new Fully Sculptured window system and you will see PVC-U in a new light.

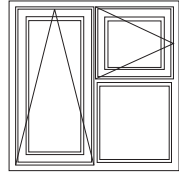

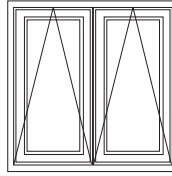

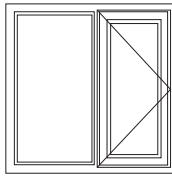

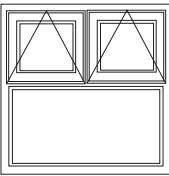

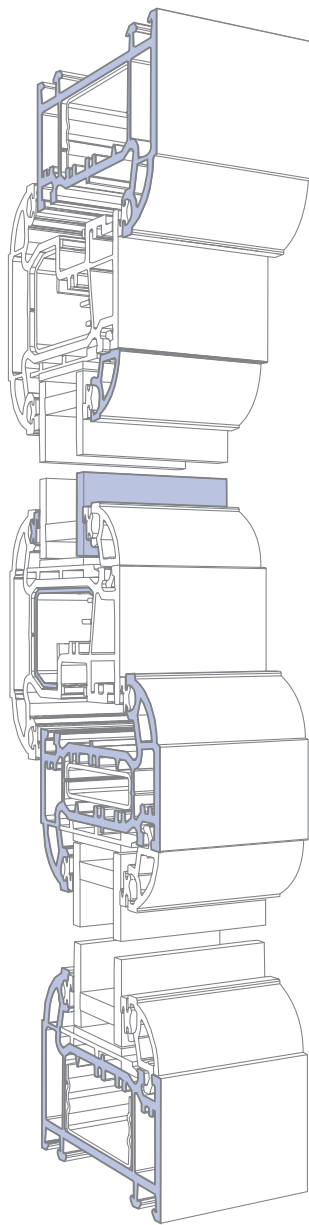

As technically advanced as it is beautiful, Matrix FS rewrites the rules, adding a softer, more rounded look to suit any home, whatever its size or vintage.

Its perfectly balanced curves and slender sightlines create a unique appearance that blends with the character of classical architecture but is equally at ease in the most contemporary of homes.

There's more than good looks to it however. Beneath the surface is the most technologically advanced PVC-U frame design ever created, with superior weather resistance, heat insulation and physical strength, plus a formulation using environmentally friendly compounds.

Matrix FS is the latest in a long heritage of PVC-U frame technology that has stood the test of time in some of the world's largest and most prestigious building projects as well as literally millions of private homes.

A light touch

Let the light into your home in a way that not only looks superb but also enhances its warmth, security and value.

Choose a window to look through but also to look at, with a softer, more rounded line that can either enhance a classical home or bring a gentler edge to the modern.

It is a window that will keep in the warmth and keep out the weather, offering unbeatable long life with only the need for minimal maintenance. It is also designed to withstand intruders, with a security specification far higher than any old-fashioned timber window.

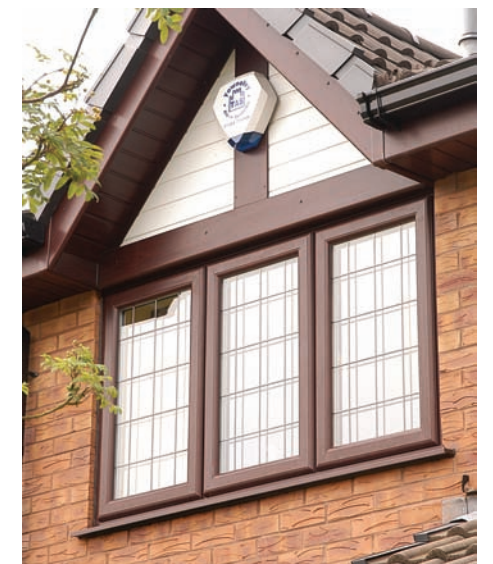

Each opening light is fitted with tough steel and alloy components including, where appropriate, multi-point

locking, hook-locks, shootbolts and other mechanisms that make it virtually impenetrable.

The style of opening is an important part of a window's character as well as its functionality. For example, sash or casement openings may suit a traditional setting without sacrificing the convenience and security of modern construction. Alternatively, the clean lines of tilt/turn openings blend in with new or old and offer additional benefits such as the ability to clean the exterior glass from indoors.

For even more variety, why not add a touch of individuality with features such as Georgian bars, decorative leading or ornamental coloured or bevelled glass.

Touch and believe

White PVC-U has a brightness that can't be matched. But modern materials and technology mean you can enjoy the same toughness, long life and low maintenance but with a woodgrain finish that's so realistic you will need to touch it to know it isn't timber. And, as well as smart, luxurious Rosewood or the casual mood of Cherrywood, you can also choose either finish on the outdoor surfaces and white on the inside – so you needn't let the look of the exterior limit your choices of interior décor.

Woodgrain finishes are every bit as resilient as PVC-U and will go on looking great for years without peeling, cracking or losing colour.

CONSERVATORIES

Light and Space

Imagine all the versatility of a conservatory with the same good looks and resilience as your new windows – all the space and light combined with the cosiness, weatherproofing and intruder-resistance of technically advanced, modern PVC-U.

Conservatories based on the Matrix FS system are designed to be a perfect match for the system's windows and doors, with the same balanced curves, slender sightlines and of course the same choice of finishes. As well as white, you can choose from rich, sophisticated

Rosewood or light, casual Cherrywood or where the location requires you can even have either of the woodgrain finishes on the exterior surfaces and white indoors.

The choice of shapes and styles is almost endless, from the classical Victorian, the vintage but practical Edwardian and the functional Lean-to, as well as any combination of these to create the P-shape L-shape, T-shape or even more complex designs.

Open new doors

Don't leave advanced technology and great looks at the door when you are choosing PVC-U home improvements. Now you can have all the looks and toughness of modern materials for the doors of your home too.

Whether it's the traditional front and back door to patio (tilt/sliding) and French (hinged) double doors, you can enjoy all the same looks, security and weather resistance and match your windows or conservatory...and with this extensive range to choose from, you can be sure there's a door to suit any home.
